Profile

Final-year Data Science and Artificial Intelligence Engineering student at the National School of Applied Sciences, Fez, with hands-on experience in Machine Learning, Deep Learning, predictive modeling, and data analysis. Experienced in developing AI-driven solutions for real-world applications and analyzing large-scale datasets. Passionate about leveraging artificial intelligence to solve complex challenges.

Education

National School of Applied Sciences <i>Engineering Cycle in Data Science and Artificial Intelligence</i>	Fez, Morocco 2024 – 2027
National School of Applied Sciences <i>Preparatory Cycle</i>	Fez, Morocco 2022 – 2024
Fès City High School <i>Baccalaureate Degree (Physical Sciences French option)</i>	Fez, Morocco 2021 – 2022

Experience

AI Engineering Intern <i>Capgemini Engineering</i>	July 2026 – Present Fez, Morocco
– Working on an AI-driven EV battery management project, involving battery data analysis, SOC and SOH estimation using deep learning, and intelligent charging optimization.	
– Technologies: Python, Pandas, NumPy, TensorFlow, Scikit-learn, Streamlit, Git	
Backend AI Engineering Trainee <i>FlyRank (Remote)</i>	July 2026 – Present Chicago, USA
– Participating in a hands-on Backend AI Engineering program focused on backend development and AI applications through real-world projects.	
– Technologies: JavaScript, Node.js, Express.js, Git, GitHub, REST APIs	
Introductory AI & Data Science Intern <i>Hassan II University Hospital Center</i>	July 2025 – Aug 2025 Fez, Morocco
– Developed a machine learning-based diabetes prediction system comparing KNN, Decision Tree, Random Forest, and Logistic Regression models.	
– Built an interactive Streamlit application for diabetes risk prediction with automated PDF medical report generation.	
– Technologies: Python, Scikit-learn, Pandas, NumPy, Streamlit, Matplotlib	

Projects

NASA Web Log Analysis <i>PySpark, Power BI, Python</i>
– Processed and analyzed large-scale NASA web server logs using PySpark and built interactive Power BI dashboards.
Music Genre Classification Using PCA <i>Python, Scikit-learn, PCA</i>
– Developed an ML pipeline for music genre classification using PCA for dimensionality reduction and model optimization.

Technical Skills

Programming Languages: Python, Java, SQL
Data Analysis: Pandas, NumPy, Power BI, Streamlit, Matplotlib
Machine Learning: Scikit-learn, KNN, Decision Tree, Random Forest, Logistic Regression, Kmeans
Deep Learning: TensorFlow, ANN, CNN, LSTM
Big Data: PySpark, Apache Spark, Hadoop, Kafka
Cloud: AWS (EC2, S3, ECS, EKS)
Tools: Git, JADE, UML, PyCharm, Visual Studio Code

Certifications

• AWS Educate Machine Learning Foundations	• Database Programming with SQL – Oracle
• Data Manipulation with Pandas – DataCamp	• Machine Learning with KNN – 365 Data Science
• Introduction to PySpark & Kafka – DataCamp	• Introducing Generative AI with AWS – Udacity

Leadership & Extracurricular Activities

- **Data Nexus Club:** Board Member, contributing to the organization of AI and data science events, including Microsoft Tech Day.
- **ICAIM 2025:** Member of the Organizing Committee for the 1st International Conference on Artificial Intelligence and Mathematics.
